

Oracle Backup Recovery and Linux DBA Notes

RMAN Essentials

- Configure retention policy and verify backup cadence with list backup summary.
- Validate recoverability regularly with RESTORE DATABASE VALIDATE.
- Use CROSSCHECK and DELETE OBSOLETE to keep catalog and storage clean.

Recovery Flow

- Media recovery requires consistent chain of backups plus archived redo.
- In incidents perform restore preview before full restore if time allows.
- Document RTO and RPO outcome after each drill.

Linux Commands for DBA

- ps -ef | grep pmon
- lsnrctl status
- iostat -xm 1 5
- vmstat 1 5
- tail -200f \$ORACLE_BASE/diag/rdbms/orcl/ORCL/trace/alert_ORCL.log
- ss -ltnp | grep 1521

Operational Guardrails

- Never assume backup job success means recovery success.
- Track archive destination capacity proactively to avoid log-switch stalls.
- Correlate DB wait events with host-level CPU and I/O metrics.
